“Technology and Global Health Policy: Focus Transportation”

All forms of transportation increase globalization through the movement of people and goods. Rapid transportation means has also opened new opportunities for economic development and improved quality of life. But as with all technological advances improvements are also accompanied by increasing economic disparities, environmental impacts and health divides. The current Panel will explore some of the major public policy issues:

1. Transportation and Global Economic Development: Policy Gaps by Professor Roger Stough (Associate Dean for Research, SPP, GMU) [40 minutes]
2. Transportation and health policy ( Arnauld Nicogossian, SPP, GMU) [20 minute]
3. Transportation health policy knowledge gaps and future research ( Laurie Schintler, Associate Professor, SPP, GMU} [20 minutes]
4. Discussions (15 minutes)
